

Scenario of Connection of ELAN to JRA SRF

- **JRA** (Joined research activity) aim at improved components for existing facilities
 - JRA is hardware oriented
 - JRA SRF is directed to TTF
- **DS** (design study) aim at “preparing a conceptional design report”
 - DS is mainly report oriented
- JRA & DS are of different character

Comments from JRA SRF to the first ELAN meeting

- **Nice presentations** at LTECSC session
 - But needs more time for detailed technical discussion, especially at the time of next meeting
 - One work package leader was missing
- Creation of a SRF (superconducting radio frequency) **data bank** is launched, great!!
- Common sessions were **not helpful** for dissemination / synergy

Proposal for next ELAN meeting

- First full day **parallel sessions** of JRA & DS
 - Will serve as “collaboration” meeting
 - Will go in scientific, progress, administrative and funding details
 - All competent partners should be present
 - Will have an executive summary for the ELAN proceedings

Proposal for next ELAN meeting, cont.

- Second day (am) common session
 - **Review / overview** by JRA & DS representatives about
 - Status of projects
 - Hot issues
 - Latest developments
- Second day (pm) common session
 - **Report / discussion** about ELAN activities

Proposal for next ELAN meeting, cont.

- Third day, parallel sessions
 - **Teaching courses** for new comers
 - JRA & DS related issues
 - In line with ELAN deliverable of courses / dissemination
- An attractive program might convince the labs to pay for travel
