

Results of the KH analyses: ***(Very preliminary)***

Two independent preliminary analyses of the 60 pb⁻¹ collected data were performed – results in very good agreement:

$$\mathbf{K_{\alpha} = 3100 \pm 1300 \text{ ev.}}$$

$$\mathbf{K_{\text{complex}} = 6800 \pm 2400}$$

$$\mathbf{\varepsilon = (162 \pm 40) \text{ eV}}$$

$$\mathbf{\Gamma = \sim(200 \pm 80) \text{ eV}}$$
